Programming Languages:
C, C++, Java, C#, JavaScript, SQL

Frameworks & Library:
.NET, ASP.NET Core MVC,
Web API, SQL Server, Angular
EF Core, jQuery, Bootstrap

Technologies:
HTML, CSS, REST API

ABOUT ME

I'm a recent BCA graduate who thrived during an immersive internship at KodNest, where I immersed myself in Java full-stack web development.

Now, as a trainee software developer at Star Knowledge Ventures, I'm broadening my horizons with .NET full-stack, mastering .NET, ASP.NET Core MVC, Web API, Angular, and an array of other tools.

With a proven track record of collaborative success and a hunger for innovation, I am eager to bring my enriched background and collaborative spirit to the forefront of dynamic development ventures.

EXPERIENCE

Star Knowledge Ventures, Mysore   **Jan 2024 - Present**
Trainee Software Developer
- Trained on Web Development using .NET technologies.
- Stock Trading application developed using .NET Framework.
  - Developed APIs and Dashboard page.
  - Optimized overall loading time of web pages.
  - Implemented Stored Procedures for retrieval of complex data.

PROJECTS

Paying Guest Management System
- A user-friendly Paying Guests Management software for PG building owners developed using .NET with C# (WinForms).
- Streamlined guest and building management, replacing manual processes.
- Featured staff management, guest admission/removal, fee collection, visitor tracking, and reporting.
- 🌐 https://karthiksgujjar.github.io/PGMS

CPU Scheduling Visualizer
This is a side project developed with an intention to help my juniors better understand the differences between various CPU Scheduling Algorithms in one go using HTML, CSS and JavaScript.
The site includes 4 algorithms, they are:
- First Come First Serve,
- Shortest Job First,
- Round Robin and
- Priority scheduling.
